

## **AMENDMENTS TO THE CLAIMS**

The listing of claims will replace all prior versions, and listings, of claims in the application:

### **Listing of Claims:**

Claim 1 (Currently Amended): A reflective film comprising a base layer made of a resin composition including an aliphatic polyester based resin as a main component, a metal thin film layer, and a protective layer in this order, wherein the aliphatic polyester based resin has at least polylactic acid based resin, wherein the base layer is arranged on the side of a surface used for reflection, has voids therein with a ratio of the voids in the base layer being 50% or less, wherein the film has an average reflectance of 90% or more in a wavelength region of 420 nm to 700 nm when irradiated with light from the side of the base layer, and wherein the resin composition further contains fine powder filler.

Claim 2 (Original): The reflective film according to claim 1, further comprising an intermediate layer between the base layer and the metal thin film layer.

Claim 3 (Currently Amended): The reflective film according to claim 1-~~or 2~~, further comprising an anchor coat layer between the base layer and the metal thin film layer.

Claim 4 (Currently Amended): The reflective film according to ~~any one of claims 1 to 3~~, wherein the metal thin film layer is a film vapor-deposited with silver alone or with an alloy of silver and other metal, or a laminate having at least one layer selected from the group consisting of a silver vapor-deposited film and the vapor-deposited film of the above-mentioned alloy.

Claim 5 (Cancelled)

Claim 6 (Cancelled)

Claim 7 (Currently Amended): The reflective film according to ~~any one of claims 1 to 4~~, wherein the resin composition further contains a hydrolysis preventing agent.

Claim 8 (Currently Amended): The reflective film according to ~~any one of claims 1 to 4 and 7~~, wherein the blending amount of aliphatic polyester resin/fine powder filler is 90/10 to 40/60 by mass ratio.

Claim 9 (Currently Amended): The reflective film according to claim 7-~~or~~-8, wherein the blending amount of the hydrolysis preventing agent is 0.1 to 3.0 mass parts per 100 mass parts of the aliphatic polyester resin.

Claim 10 (Currently Amended): The reflective film according to ~~any one of claims 1 to 4 and 7 to 9~~, wherein the base layer is a film obtained by drawing a film made of the resin composition at least monoaxially to an area ratio of 5 times or more.

Claim 11 (Currently Amended): A reflective plate for a liquid crystal display device, wherein the reflective plate for a liquid crystal display device comprises the reflective film according to ~~any one of claims 1 to 4 and 7 to 10~~.
